Find journal articles using Library Search

1. Begin at **My Ara**: https://myara.ara.ac.nz/

2. Click on **Library Search** tile.
3. If you find an article from a non-Ara internet source e.g. Semantic Scholar or Pubmed and it is not in full text, use these instructions to see if Ara has access via a subscribed source.

Sample journal article title:

Asher, J.B.(2008). The Cartwright report twenty years on. *Nursing New Zealand*, *14*(7), 2.

4. Type the journal article title into the **Search box** and use the drop down to select **Journal articles**
   e.g.
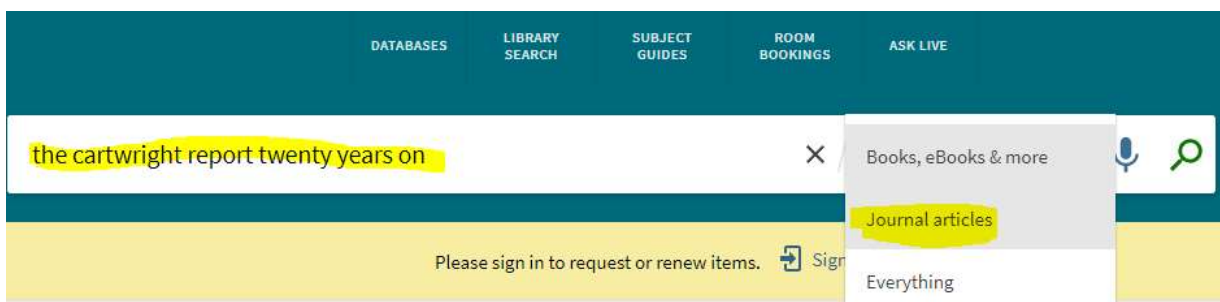

5. Press **Enter** on your keyboard or click on the **Search button**

6. If the title appears in your results
   then click on "**Available
   Online**" below the title to see
   which databases hold this title .

7. Under **View online** click on the database name e.g. CINAHL Ultimate

8**.** If prompted, use your **student email** and **password** to login.
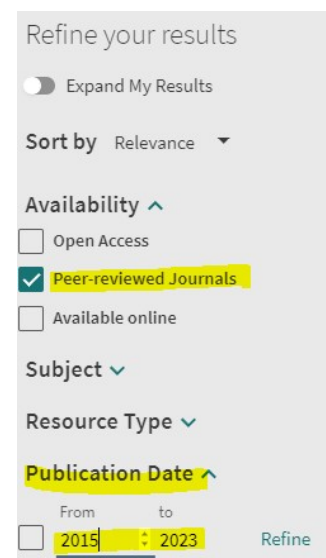

9. You should be taken directly to the database to gain access to the full text of
   the article you searched for.

10**.** Note 1 : If the article did not open, then directly access the database
indicated in Library Search via A-Z Databases on the Library homepage and do
a search for the article title within that database.

11. Note 2: You can do the same search to find which
databases might hold information on your topic. If you do
this, then remember to tick **peer-reviewed** and limit your
search by **publication date** if these aspects are important
in your results.
