

Printing multiple objects per sheet

Printing multiple images per sheet

1. Select the images you wish to print.
2. Right click over the blue selection area, and left click **print**.
3. The **Print Pictures** dialog box will appear with options to adjust the number of images printed per sheet and to select the printer.
4. When the settings are adjusted to your preference, click **print**.

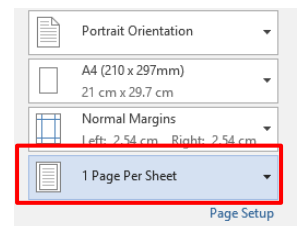

This functionality requires the Windows 10 'Photos' application to be the default photo viewer on your device.

An alternative method is to insert the images into a Word document and adjust the layout of the images to suit before printing the document.

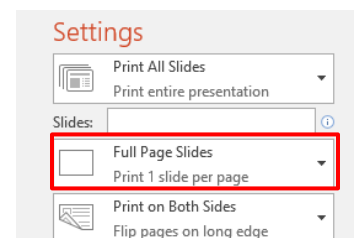

Printing multiple pages per sheet in MS Word

1. With the document open, Click **File**, then click **Print**.
2. Click on the final drop-down option, which by default will display as 1 page per sheet.
3. This list will provide a number of options for printing multiple sheets per page.
4. When the settings are adjusted to your preference, click **print**.

Printing multiple PowerPoint slides per sheet

1. With the PowerPoint open, Click **File**, then click **Print**.
2. Click the drop-down option, which by default will display as Full Page Slides in the **Settings** section.
3. This list will provide a range of options for printing multiple PowerPoint slides per page.
4. When the settings are adjusted to your preference, click **print**.

Printing multiple pages per sheet in Adobe Acrobat DC

1. With the pdf open, Click **File**, then click **Print**.
2. Within the print settings, click the **Multiple** option in the Page sizing & Handling section.
3. This will provide you with a range of options for printing multiple pages per sheet.
4. When the settings are adjusted to your preference, click **Print**.
